iCloud: Apple Features Using iCloud - Mail Recents

April 2019

File name Recents.xml

File description This file contains information about the user's recent interactions with other individuals.

Why Apple keeps this information Apple retains this information to help determine whether to treat certain incoming communications as spam and in order to improve email and phone number suggestions for users

Field Name	Details
Address	The email address, phone number, or other identifier used to communicate with a person
Display Name	The display name for the individual with whom the user recently interacted, if known
Sending Address	The user's account address from which the recent interaction originated
Encoding Version	The software version with which this record was created
T	The dates on which the user last interacted with the individual, for the last five interactions
Original Source	The app through which the user last interacted with the individual
